## DETAILED ACTION

### *Election/Restrictions*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-10, drawn to an aerogel absorbent, classified in class 435, subclass 5.
- II. Claims 11-19, drawn to a method of detecting an airborne contaminant, classified in class 436, subclass 501.

The inventions are distinct, each from the other because of the following reasons:

Inventions Group II and Group I are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the method can be practiced by a different apparatus. A different material than an aerogel material may be used to detect airborne contaminants.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

During a telephone conversation with Alan Thompson on September 27, 2003 a provisional election was made with traverse to prosecute the invention of Group II, claims 11-19. Affirmation of this election must be made by applicant in replying to this

Office action. Claims 1-10 are withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims **11-19** are rejected under 35 U.S.C. 102(e) as being anticipated by Daitch et al. (USPN 6,447,991).

Daitch discloses a method of using a smart aerogel for detection of airborne contaminants. The method comprises providing a doped aerogel sample, passing an airborne contaminant (bioaerosol) through an aerogel sample, removing the aerogel sample and assayed through we chemistry processes to determine how much and what kind of biolmolecules the smart aeorgel sample absorbed (col. 8, line 63-col. 9, line14). The aerogel sample can be made of multifunctional materials with unique properties that enable one to adsorb airborne contaminants (col. 1, line 55-col. 2, line 25; 3, line 31-64). The aerogel absorbate can be selected to render results as highly selective or relatively selective (col. 7, line 57-col. 8 ,line 28).
